

LIFE INSUBRICUS

LIFE19 NAT/IT/000883

Presented by Daniele Seglie

ELEADE Società Cooperativa

Objectives

- Conserve the target species **Pelobates fuscus insubricus**
- Involve actions on both the **species** and the **habitat** favoring population growth and long-term maintenance
- **Restore** and **improve** existing **wetlands** and the creation of new areas for reproduction and repopulation
- Generate positive outcomes also on the **conservation of other amphibians** that share the same habitats

Speed presentations – ARC Platform Meeting – 22nd May – Santander, Spain

Results relevant to the Climate Change and Protected Areas theme

- No. **240.000** larvae and young specimens released
- No. **90** private individuals involved and aware to the conservation of the target species
- No. **22** junior herpetologists and **141** volunteers involved in the activities
- No. **14** N2K sites monitored
- No. **41** release sites targeted for rehabilitation and reintroduction in N2K areas
- No. **11** wetlands restored and enhanced

Results relevant to the ARC and Invasive Species theme

- More than **6.000** *P. clarkii* specimens captured

Lessons learnt

- Best practice: **breeding method**
- Severe drought and temporary conditions of the wetlands are **less suitable** for the return of **Invasive Species** but **very attractive** for all **amphibian species**

Speed presentations – ARC Platform Meeting – 22nd May – Santander, Spain

Key Messages to Share

- **Involve** public and private entities
- **Stakeholder** and **volunteer** engagement
- **Train and raise awareness** among the next generation
- **Disseminating** results
- **Sharing methodologies** and **monitoring protocols**
- **Wetland restoration** and **creation** to **mitigate** the impacts of **climate change** and **alien species** by regulating the hydroperiod
